What it does

The Course Feedback App allows users to type in a course name, pick a rating from 1 to 5, and write a comment. Besides saving each feedback during the session, the app also shows all submitted feedback, computes the average rating, and exports to a CSV file that you can open with Excel.

Best for: students, instructors, tutoring programs, and small course teams that need a quick way to collect and review feedback.

Core features

Add feedback	Rating dropdown	Average rating	CSV export
Enter course name, rating, and comment.	Select a rating from 1 to 5.	Automatically calculates the class average.	Creates a spreadsheet ready results file.

Professional practices shown

- Modular methods for adding feedback, calculating averages, and exporting data.
- Input checking prevents blank course names or comments.
- Simple file handling supports post delivery reporting.

System requirements

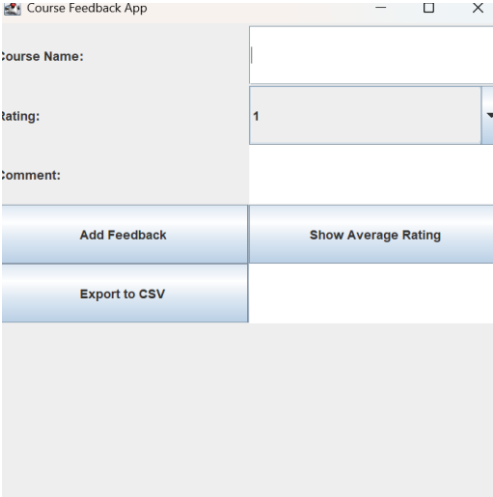

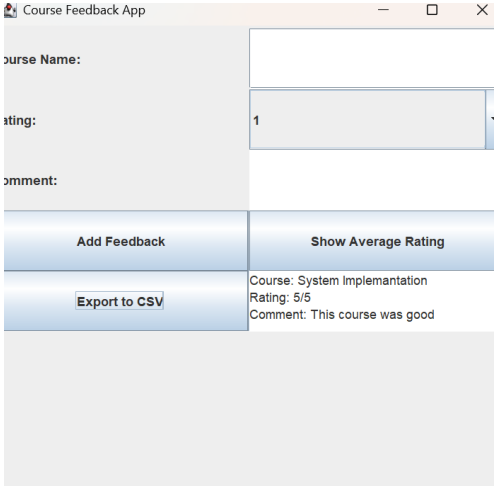

- Windows, Mac, or Linux computer that can run Java programs
- Eclipse IDE or a runnable Java file
- Basic file access for CSV export
- Internet only needed for GitHub or demo links

Demo focus

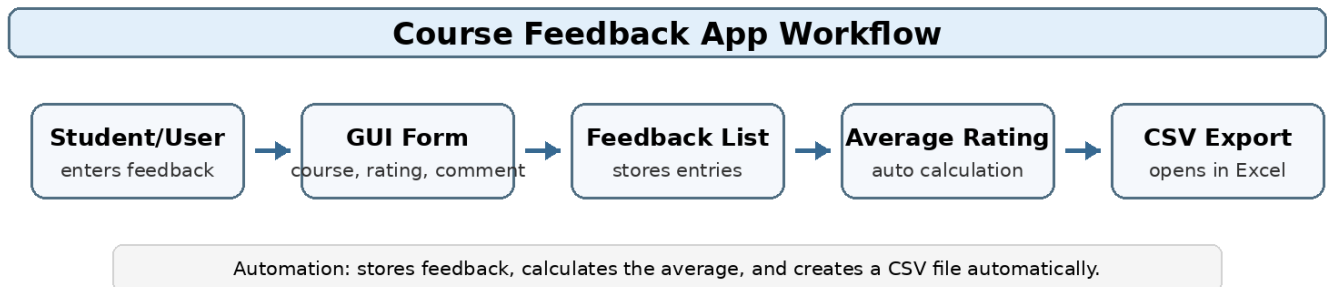

- Add sample course feedback through the GUI.
- Show automatic average rating calculation.
- Export the results to CSV as the automation feature.

Sample Screens and Workflow

Sample screens

Empty feedback form	Feedback added and displayed
	

System workflow

Smart automation

- Stores feedback entries after the user clicks Add Feedback.
- Calculates the average rating from all submitted ratings.
- Creates a CSV file without manual copying and pasting.

Clear feedback. Automatic reporting.
